

عبد الرحمن

① 12 b $(2+5+3+2)$

② $60\% \text{ a}$

$$= \frac{2+2+3+5}{20} = 60\%$$

③ 39.5

$$\text{m. \& points} = 20, 30, 40, 50, 60, 70$$

كل فئة من تكرارها و نقيم على العدد الذي

$$\therefore = \frac{790}{20} = 39.5$$

④ there could be a spot in the lake where it is deeper than 1.5 meters (d)

①

a) Range = $40 - 3 = 37$

b) Variance = $s^2 = \frac{\sum (x - \bar{x})^2}{n - 1} = \frac{1086}{6 - 1} = 217.2$

c) $std = s = \sqrt{217.2} = 14.74$

②

standard deviation = zero
and mode = 90

③

All measures of central tendency are negative, while all measures of dispersion are non-negative. (C)

④

the sum of the deviations from 1 equals zero (C)
